

Everything needed to bring electricity to you.

What your monthly facility charge covers

Gaining Insight into Your Statement

FACILITY CHARGE

Fixed monthly charge associated with the service location's maintenance, equipment and necessary upgrades to provide location with reliable and quality electric service. The specific amount of the facility charge varies depending on the size of the service at the location. Review the reverse side of insert for a visual of what is needed to power your service location.

ENERGY CHARGE

This charge is associated with the purchasing of electricity from Franklin REC. It is based on your service location's electric usage on a monthly cycle. The charge is a variable amount based on the quantity of kilowatts metered at the specific service location during the billing period.

***Keep in mind your billing statement reflects kilowatt usage from the previous month. For example the statement received in August is for July's kilowatt usage.**

Energy Cost Adjustment: This charge is calculated by comparing Franklin REC's overall usage for the month to the cost of power purchased from our energy supplier. The purpose of an energy cost adjustment is to ensure the prices charged to member-consumers accurately reflect the current costs of supplying energy. By incorporating energy cost adjustments, Franklin REC can maintain a more accurate and fair pricing structure.
